                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               thtrombomponding prequence - orlicken

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Phylopichics to grocein ANSPARGATION 1 human (fragment)

- ANALYTIC ACTUARY: Cleaves agreems at the 1838-510-(-Ala-1839)
- Cream waterates are the 1438-501 (-Ala-1839)
- Cream waterates are the 1438-501 (-Ala-1839)
- Cream waterates are the 1438-501 (-Ala-1839)
- ANALYTIC ACTUARY: Cleaves advantaged with the extracellular
- ANALYTIC My stablishing account. FUNCTION: Cleaves the large aggregating proteoglycans, aggrecan

Name of Policy 13, 1990 | Name of Section 2) | Name of Section 2, Name

-i- SIMILARITY: Belongs to peptidase family M12B.
-i- SIMILARITY: Contains d idantegrin-like domain.
-i- SIMILARITY: Contains 1 GON domain.
-i- SIMILARITY: Contains 15 TSP type-1 domains.

The invention comprises the matto exist and coding squence of a von Willabeard stateor (very)-cleaving energyes. The DNA and protein sequences of the invention are seated in it has disponsible and treatment for cities introduced properties part in the disponsible and treatment of cities. The protein comparison to the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the

25-JAN-2002; 2002US-00057487. 16-OCT-2001; 2001US-00978979

New isolated DNA molecule exceding an aggrecanase polypeptide for producing a purified human aggrecanase protein which can be used to develop infultors of aggrecanase. Claim 14; SEQ ID NO 8; 24pp; English. This invention raless to a novel haws appearance potent and the DNA sequence which encodes it. Aggreen is a major extractibilat component of actious continge. It is professybuse regionate for providing cartilage with its mechanical properties of compressability and adjacticity. A proceleyfur entryity forgermane's is repossable for the cleavage of aggreen insetby having a role in cartilage degradation

senceited with descentities and inflamentory joint disease, compound which inhibit the scriity of the present of the invention may have andicathicities casepainted or mainfallamentory activity. The livention may be used to produce a purified human appressment procein. The growth the administration of the produce a purified human appressment procein. The growth the disease and the procein and any act of the procein and any act of the procein and any act of the procein and any act of the procein and any act of the procein and appressment as used to inhibit the procein and the any act of the procein and appressment and the procein and appressment and the procein and appressment and appressment and appressment and appressment appressment and the human appressment appressment (full length sequence) of the invention.

Their and a process for propagating the proteins and with a constitution of the constitution of the constitution of diseases.
New isolated Protein Modification and Maintenance polypeptides, useful for diagnosis, and treatment of e.g. gastrointestinal disorders.
